Biochemical Reagent

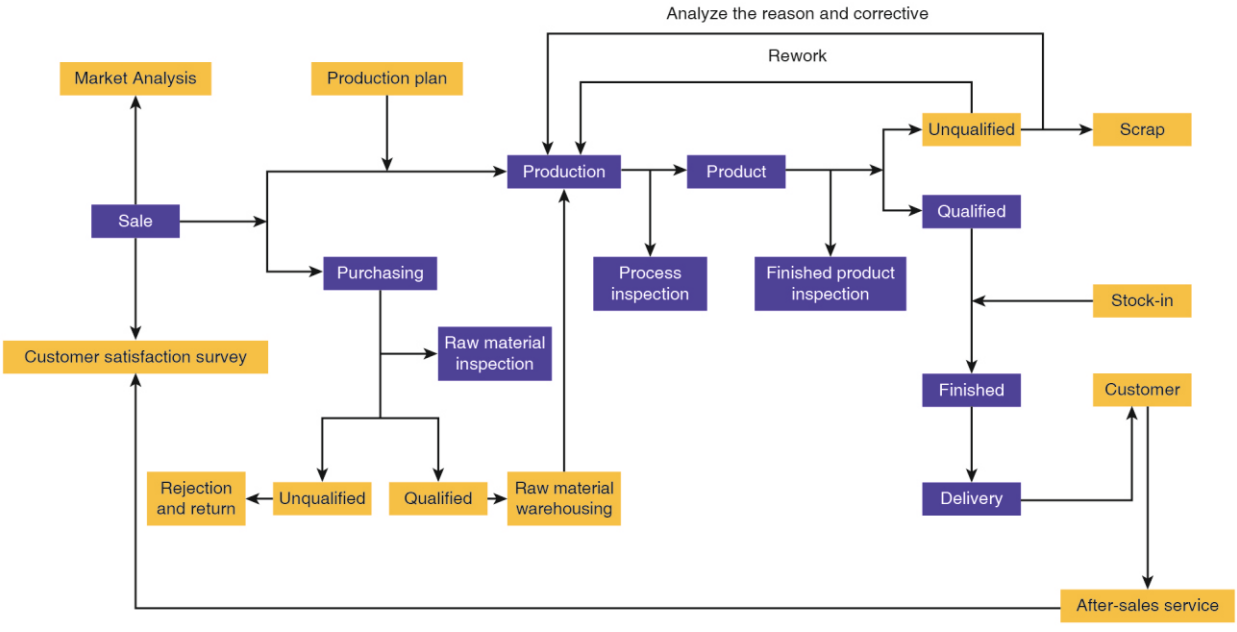
Product Description

Biochemical reagents refer to biological materials or organic compounds related to life science research, which can be widely used in related fields such as life science research, biological product manufacturing, agriculture, environmental monitoring, and food industry. There are nearly 6000 biochemical reagents pruduct, with diverse specifications, stable performance, reliable quality, high literature citation rate, and the highest IF reaching 82.9. In the field of biological research, it can meet the diverse scientific research needs of molecules, proteins, cells. As a high-quality supplier of biochemical reagents, Solarbio has high recognition and praise rates, aiming to provide a one-stop procurement and comprehensive service platform for scientific researchers.

Quality Control Standards

Biochemical reagents are strictly operated in accordance with the ISO9001 quality management system standards throughout the entire process, from material procurement, production and quality control, finished product delivery, storage and transportation to customer service, ensuring traceability at all stages. The materials for biochemical reagents are all from qualified suppliers, and the products undergo three main inspection processes: material inspection, process inspection, and product inspection. The inspection items mainly include physical and chemical properties (appearance, solubility, pH, purity, etc.) and biological performance testing(biological activity, stability, sensitivity, accuracy, etc.) . Each inspection and production process strictly follows SOP operating procedures to ensure product quality.



Quality Control Flow Chart

Product Category

According to the metabolic substance classification of organism

Divided into amino acid, polypeptide, protein, nucleotide, nucleic acids, enzymes, coenzyme, sugar, ester, hormone, etc.

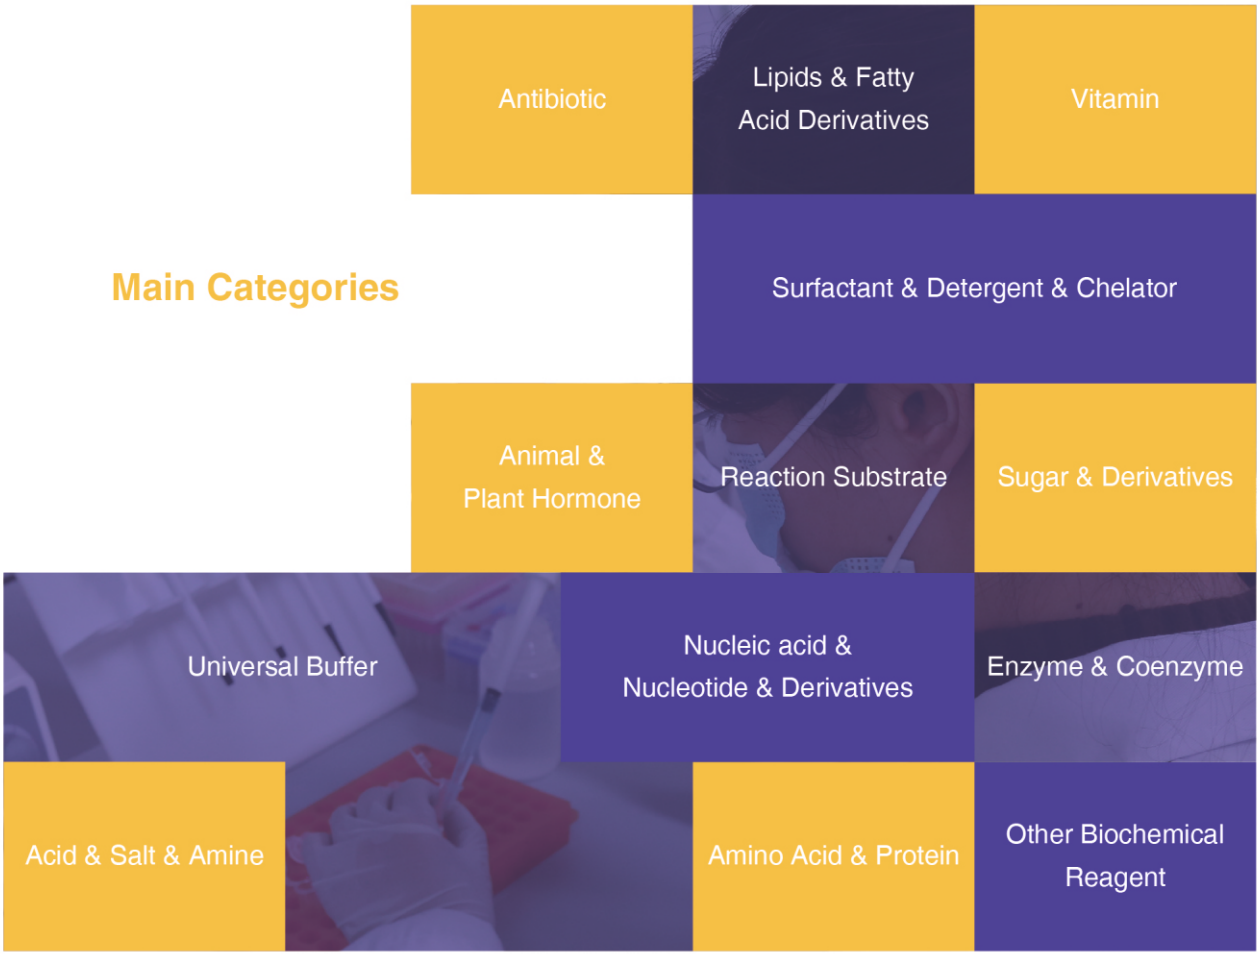
According to the biological application direction classification

Divided into molecular detection, cell detection, immune reagent, chromatography detection, system buffer, surfactants, etc.

According to the level of purity classification

It is divided into Guaranteed Reagent (GR), Analytical Reagent (AR), Chemical Pure (CP), Biological Reagent (BR), etc.

Main Categories



Application

Featured Products

1,4-Dithio-DL-Threitol (Cat.No D8220)

01 Product Description

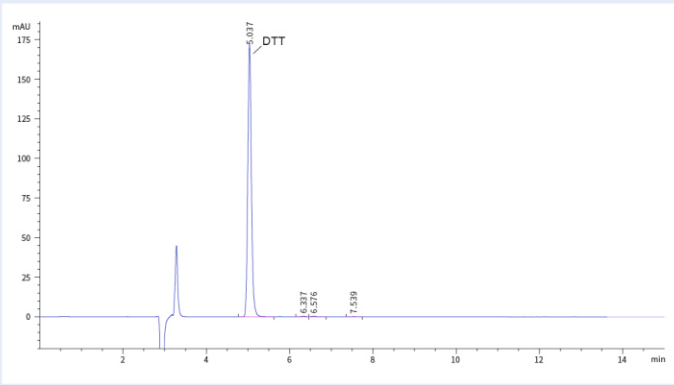
1,4-Dithio-DL-Threitol (DTT) is a strong reducing reagent that can reduce protein S-S bonds. It is commonly used as a thiol protecting agent and enzyme specific inhibitor in biochemical research.

02 Quality Control

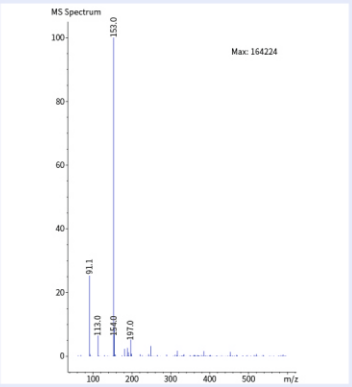
Test	Specification	Test method
Appearance	White to off-white powder	Visual inspection
Purity	⩾ 99.5%	HPLC
Solubility (100 mg/mL, H_2O)	Clear colorless liquid	Solubility testing
UV (0.1 M, H_2O, 25℃)	A260 ⩽ 0.4; A280 ⩽ 0.1	UV
pH (0.1 M, H_2O, 25℃)	4.0-6.5	pH detection
Mass Spectrum	Conforms to structure	MS
Biological Performance Testing	Preparation of SDS-PAGE sample buffer	Protein denaturation treatment

Data

Purity (HPLC): ⩾99.5%



Mass Spectrum (MS):



03 Application

1. As reducing and deprotecting agents for thiolated DNA.
2. Reducing disulfide bonds in proteins.
3. Stabilizers of enzymes, antibodies and growth factors.
4. Large-scale isolation and purification of proteins.

04 Case Study

IPTG (Isopropyl-β-D-Thiogalactoside) (Cat.No I8070)

01 Product Description

Isopropyl-β-D-thiogalactoside (IPTG) is an allolactose mimic that can induce the transcription process of lactose operon and participate in gene regulation, protein expression, and recombinant protein production. Generally used to induce gene expression in bacterial systems or in combination with X-gal chromogenic substrates for blue and white spot screening.

02 Quality Control

Trypsin 1:250 (Cat.No T8150)

01 Product Description

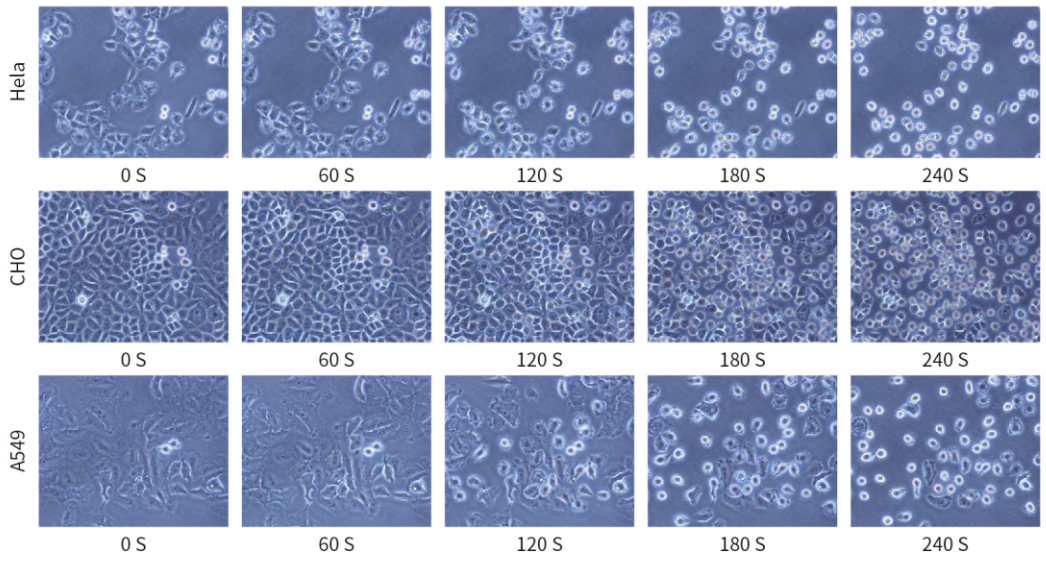
Trypsin is a serine protease that specifically acts on the carboxyl terminus of Lys or Arg residues of proteins or peptide chains. It is an important enzyme reagent in biology.

02 Quality Control

Test	Specification	Test method
Appearance	White powder	Visual inspection
Solubility (0.25%, PBS)	Colorless transparent solution	Solubility testing
pH (0.2% Aqueous Solution)	3.0-5.0	pH detection
Trypsin (U/mg)	⩾ 250	“Chinese Pharmacopoeia 2020”
Chymotrypsin (U/mg)	⩽ 75	“Chinese Pharmacopoeia 2020”
Loss on Drying	⩽ 0.5%	Halogen moisture tester detection
Biological Performance Testing	Cell digestion effect detection, it has a digestive effect on most cells in 2 minute.	

Data

Biological Performance Test: the trypsin digestive solution (0.25%) was prepared to digest different cells and test the digestion effect.



Note: The above are different digested cells, namely Hela, CHO, and A549. At 2 minutes, the microscopic cell morphology began to become round and the visual field became brighter.

03 Application

1. Trypsin is used as molecular weight standard.
2. Degradation of extracellular matrix for cell subculture.
3. Hydrolyze proteins for proteomics research.
4. Used for preparing single-cell suspensions.
5. Used for separation and purification of protein&peptide.
6. Used for in vitro digestion, cell differentiation,etc.

Tris (Cat.No T8060)

01 Product Description

Tris is an amino-based alkaline buffer reagent with characteristics such as pH stability, high conductivity, low ionic strength, and good water solubility. Its effective buffering pH range is 7.0-9.2. In the processing of biological cells and tissues, it is generally non-toxic and non-irritating, and is widely used as a biological buffer to maintain the stability of solution pH.

02 Quality Control

Test	Specification	Test method

Coomassie Brilliant Blue G-250 (Cat.No C8420)

01 Product Description

Coomassie Brilliant Blue G-250 is a triphenylmethane dye that contains hydrophobic and negatively charged groups in its molecular structure. It can specifically bind with hydrophobic and positively charged groups (especially arginine) from proteins in alkaline environments. It is commonly used in molecular biology for protein coloration, quantitative detection. It is also still a safe and highly selective P2×7R antagonist, and it is expected to inactivate NLRP3 inflammasome.

Lipopolysaccharides (LPS) (Cat.No L8880)

01 Product Description

LPS is an important outer membrane component of Gram negative bacteria, which has a significant impact on the survival and pathogenicity of bacteria. Its complete structure includes hydrophobic lipid A, hydrophilic core polysaccharide chain, and a specific O-antigen oligosaccharide side chain. LPS has characteristics such as dose dependence and serotype specificity. Lipopolysaccharides express their effects through TLR4 present in the target cell membrane and play an important role in natural immunity by activating inflammation related proteins.

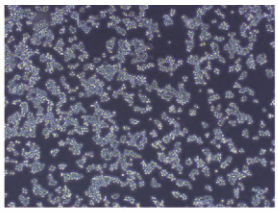
02 Quality Control

Test	Specification	Test method
Appearance	White or off white lyophilized powder	Visual inspection
Solubility (5 mg/mL, H_2O)	Colorless transparent solution	Solubility testing
Potency	⩾ 500,000 EU/mg	
Protein Content	⩽ 3.0%	Lowry-TCA
Performance Testing	Inducing RAW264.7 cells and mouse inflammation model, Detection of significant increase in inflammatory cytokine IL-6	

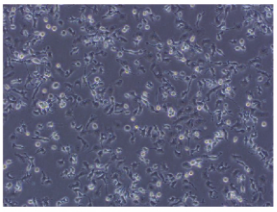
Data

Biological Performance Testing:

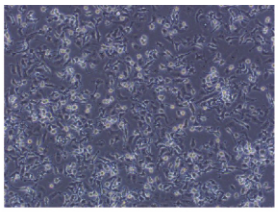
1.Induced inflammatory response in RAW264.7 cells: RAW264.7 cells were treated with different concentrations of lipopolysaccharide for 24 hours, and the cells showed a differentiated state.



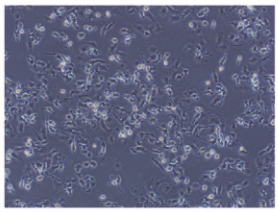
0 ng/mL LPS



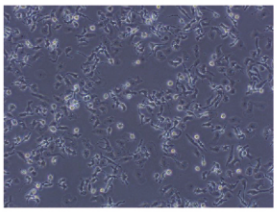
50 ng/mL LPS



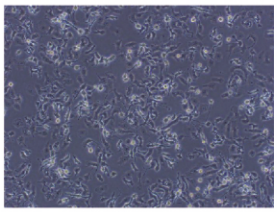
100 ng/mL LPS



500 ng/mL LPS

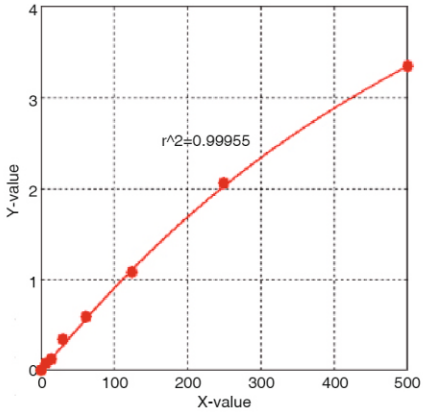


1000 ng/mL LPS



5000 ng/mL LPS

2.Induction of inflammatory reaction in mice: After taking the serum of mice 1 hour after the injection of 20 mg/kg of LPS to detect the content of IL-6, it was found that the serum content of IL-6 in mice was significantly increased 1 hour after the injection.



Standard Curve (pg/mL)	0	7.813	15.625	31.25	62.5	125	250	500
Corrected OD Value	0	0.07	0.124	0.335	0.58	1.079	2.052	3.337

Hoechst 33258 Fluorescent Dye (Cat.No B8030)

01 Product Description

Hoechst 33258 is a bright blue fluorescent compound with cell permeability and head-to-tail benzimidazole structure. It can bind to small grooves of dsDNA and preferentially bind to sequences rich in adenine and thymine to form Hoechst33258-nucleic acid complex. The maximum excitation and emission wavelengths of the complex are Ex/Em = 352/461 nm, which is commonly used in cell line studies in vitro.

02 Quality Control

Test	Specification	Test method
Appearance	Yellow or green powder	Visual inspection
