ELISA Kits

Beijing Solarbio Science & Technology Co.,Ltd.

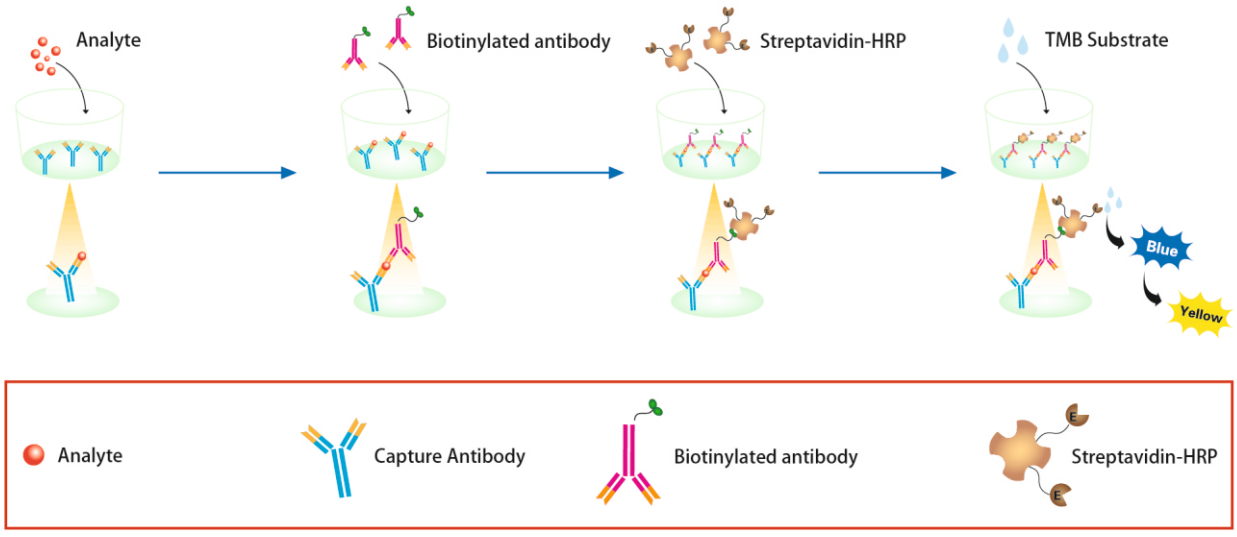

Introduction

ELISA (enzyme-linked immunosorbent assay) kits are convenient,rapid and accurate research tool for the detection and quantitation of targeting molecules in samples.Solarbio ELISA kits are used to detect thousands of different proteins and molecules which including cytokines, growth factors and receptors in different species,such as human,mouse,rat,bovine,horse,sheep,goat,donkey,chicken,duck,porcine,rabbit,canine,monkey,etc.More than 1500 ELISA kits are in stock.

Solarbio established an independent platform for the research and development of ELISA kits after ten years of technological accumulation.High quality ELISA kits depends on optimization during the whole development process.Solarbio ELISA kits are required to meet strict manufacturing and quality control standards which ensure the high performance and consistency.Solarbio ELISA kits are fully validated,ready-to-use immunoassay kits which are designed to measure target proteins in a number of complex sample types.These assays are based on the two-site sandwich immunoassay principle which means two highly specific antibodies are used to detect the same target analytes.Furthermore,monoclonal antibodies are usually be used as capture antibodies,polyclonal antibodies as detection antibodies.Multiple steps are taken during development which ensure that our ELISA kits have superior performance.

Our commitment is to supply accurate,efficient,reliable and cost-effective analytical options for our clients and satisfy customer expectation.

Manufacturing&Quality Control Standards

- Rigorous screening of antibody pairs for optimal performance
- Automated microplate coating with precision of less than 10% coefficient of variation
- Formulation of diluents that alleviate interferences due to matrix phenomena and heterophilic antibody interactions
- Performance testing with all validated sample types

Precision	Specificity	Sensitivity	Repeatability	Cross-reactivity
Accuracy	Stability	Linearity	Recovery	Natural Samples

Precision

The coefficient of variation of both intra-assay and inter-assay were less than 10%.

Linearity

Dilution Ratio	Recovery(%)	Citrate Plasma	Cell Culture Supernatants	Serum
1:2	Average% of Expected	91	94	95
	Range (%)	85-97	86-103	87-107
1:4	Average% of Expected	98	96	94

	Range (%)	93-111	95-103	94-101
1:16	Average% of Expected	108	105	93
	Range (%)	96-120	98-112	89-97

Recovery

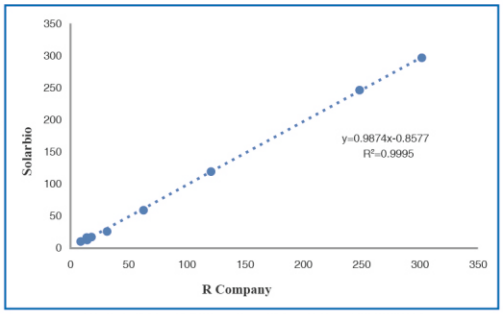

Sample Type	Average % of Expected Range (%)	Range (%)
Citrate plasma(n=4)	86	82-91
Cell culture supernates(n=4)	95	90-100
Serum(n=4)	98	93-103

Natural Samples

Analysis of natural samples in each of the validated matrices, such as serum, plasma, cell culture supernates and so on.

Advantages

- Excellent quality:All reagents are screened in many ways,the technical process system is perfect, the quality control is strict and accurate;
- Ready-to-use:Full set of reagent is including in package,450nm test,convenient and easy to use;
- Rapid:The whole reaction process only needs 3.5h;
- Full range:1100+ for Human,Rat,Mouse;400+ for Porcine,Bovine,Goat,Chicken,Duck,et.al;
- Wide applications:The analysis covers ten major research and development areas;
- Priority Performance:High sensitivity & repeatability & coincidence rate(99.95%).
