Recombinant Protein

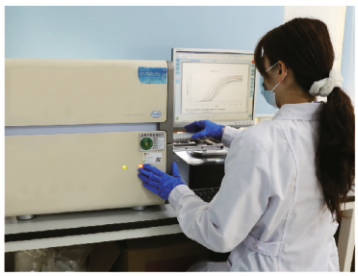

Beijing Solarbio Science & Technology Co.,Ltd.

Product Introduction

Solarbio recombinant proteins are developed and produced in accordance with strict quality control standards.A variety of chromatography purification methods,nucleic acid sequencing, protein purity/concentration identification and multiple verifications which are used to ensure the high purity and quality of recombinant proteins.The data of sequence information which comes from the human genome cDNA library is stable and reliable,each batch of recombinant proteins has been repeatedly tested to ensure the qualification rate of recombinant proteins and the uniformity of the batches.At present,recombinant proteins cover more than 2,000 active proteins,such as interleukins,chemokines,cytokines and important target proteins,as well as more than 6,000 other types of recombinant proteins,which can be used for antibody and immunology research.At the same time,new recombinant proteins that is combined with the current research hotspots and hot fields are continuously launched.There are about 2,000 new products every year.

R&D and Quality Control Platform

Quality Control Standards

- **Sequence Source**

  Human genome full-length cDNA library.Nucleic acid sequences which have been verified by multiplexed sequencing are safe and reliable.

- **Expression Systems**

  Self-established protein expression platform and mature E.coli prokaryotic expression system.

- **Protein Purification**

  Protein extraction,affinity chromatography,ion exchange chromatography and multiplex purification system are used to ensure high purity of protein.

- **Identification and Storage**

  BSA and SDS-PAGE electrophoresis with coomassie brilliant blue staining methods are used for quality analysis of recombinant protein.purity≥90%,concentration≥0.8mg/mL,storage at -80℃,shipped as lyophilized powder.

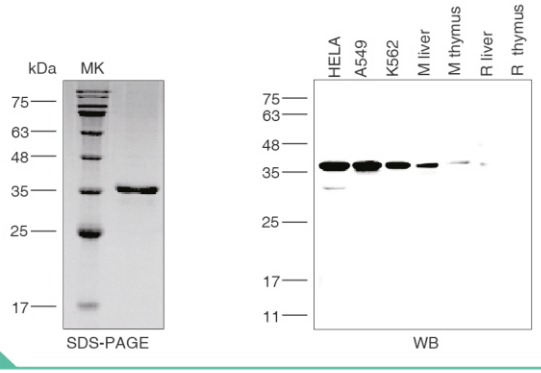

- **Quality Control**

  R&D,production,quality control are carried out in accordance with SOP. All data is traceability,repeatability and reproducibility.

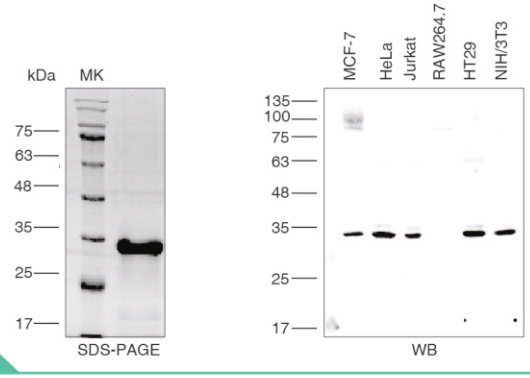

Quality Control Data

All products are tested for purity and specificity by SDS-PAGE and WB, and the test results of some products are show below:

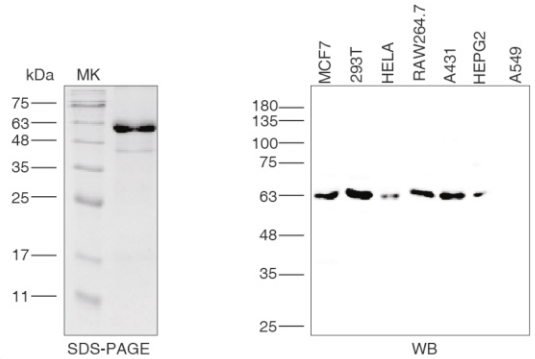

P02354 Recombinant Human WTAP Protein

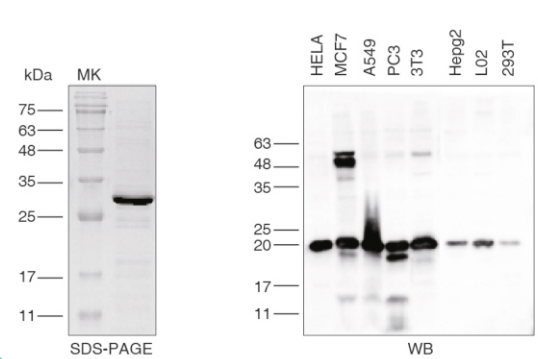

P02522 Recombinant Human PUS7 Protein

P02636 Recombinant Human AFP Protein

P02686 Recombinant Human S100A9 Protein

Application Fields

- Cytokine
- Antigen
- Antibody Preparation
- Immunological Detection
- Protein Structure Analysis
- Protein Function Research
- Enzymatic Research
- Antibody Drug Development

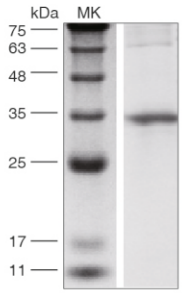

Main Products

- Interleukin
- Oncogene-related
- S100 Calcium-binding Proteins
- Protein Phosphatase-related
- Heat Shock Proteins
- Actin
- Annexin
- Fibroblast Growth Factor
- G Protein
- Fusion Proteins
- Histone-related
- Fluorescent Proteins
- Tubulin
- Ubiquitin-specific Peptidases
- Keratin
- Tumor Necrosis Factor
- Tagged Proteins
- Ubiquitin-binding Enzymes
