Antibody

Beijing Solarbio Science & Technology Co.,Ltd.

Introduction

Solarbio antibody is prepared under the standard quality control system.Antibody is purified by affinity chromatography and have the characteristics of high specificity and affinity.Considering the characteristics of target protein for the antibody,such as isomer,activator,modification and protein interaction,etc.Whether the antibody is qualified by testing multiple application and verification(WB,IHC,IF,FC,IP,KO,etc)for different types of samples.We also test repeatedly to ensure the lot-to-lot consistency of each batch antibodies and the repeatability and reproducibility of the experiments.Annual production capacity is about 2000 antibodies for new target.

Antibody was validated in accordance with the standard procedure before shipment. Antibodies are stored as freeze-dried powder at -20°C.Before shipment,we diluted the antibody with dilution containing glycerol and stabilizer.We ensure the stability of antibody while avoiding repeated freezing and thawing in the experimental process.

We provide you with high quality products and service. Please enjoy the best service you deserve.

R&D and QC platform

The best experimental results are guaranteed by professional research and development personnel who is equipped with advanced instruments

Manufacturing&Quality Control Standards

- **Immunogen(peptide/recombinant protein)**

  Purity of peptide/recombinant protein>90%,High-purity immunogen make high-affinity antibodies;

- **Immunization**

  The largest animal immunization base in China/Pure New Zealand rabbits/Professional technicians/Mature emulsification technology and immunization technology/We apply the technology that the hybridoma cell lines secreted stable monoclonal antibodies;

- **Antibody Validation**

  To ensure the repeatability of the experimental results, we use multiple applications(WB,IHC,ELISA,IF,FC,IP,etc) and different samples to verify antibodies,especially specificity,consistency and reproducibility;

- **Quality Control**

  Strictly follow the experimental standard of process.Quality control testing every batch of products, the dates are real, traceable and repeatable.

FCM

According to the theoretical value,a certain number of positive cells appeared(Fig 8)

K009401M/K009402M/K009403M(CD20/CD10/CD3)

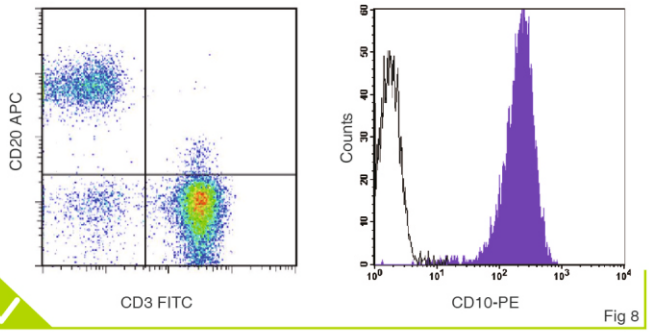

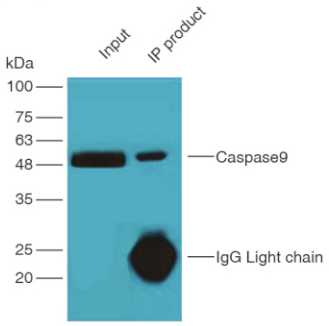

Fig 8

IP

The bands of control samples are clear,the bands of IP products are also clear(Fig 9)

K200024M

Input:Hela Cell Lysate
IP product:IP dilute 1:200

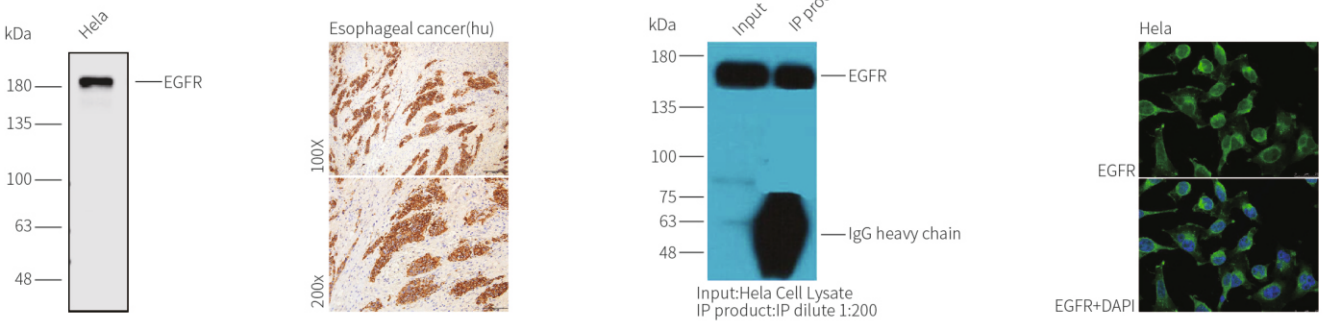

Fig 9

Multiple Validations

Application

These antibodies are validated in multiple applications,such as WB, IHC, IF, FC, IP/Co-IP,etc.

K200028M

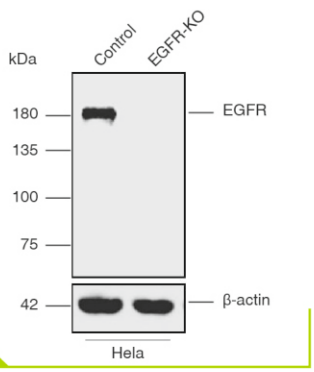

Input:Hela Cell Lysate
IP product:IP dilute 1:200

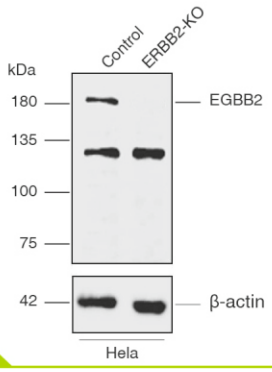

Knock Out

Western blot using knock out (KO) cell lysate has become a new practice for antibody validation. In KO validation,a knockout cell line was paired with the parental cell line in western blot analysis.A truly specific antibody recognizes the target protein of right molecular weight in the WT cell lysate,but not in the KO cell lysate.

Description

Primary Antibody	Secondary Antibody	Tag Antibody
Loading Controls Antibody	Modified Antibody	Label the Antibody

Application Fields

Immunology	Cell Biology	Cancer	Cardiovascular
Signal Transduction	Neuroscience	Stem Cell	Microbiology
Epigenetics	Developmental Biology	Metabolic Regulation	

Solarbio antibody covers more than 80 signal pathways targets with a wide selection range.

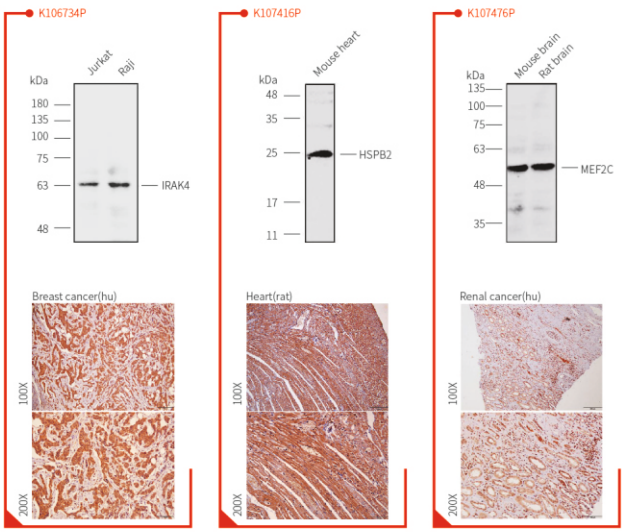

1. MAPK-p38 Signaling Pathway
2. JAK-STAT Signaling Pathway
3. PI3K-AKT Signaling Pathway
4. mTOR Signaling Pathway
5. NF-κB Signaling Pathway
6. Wnt Signaling Pathway

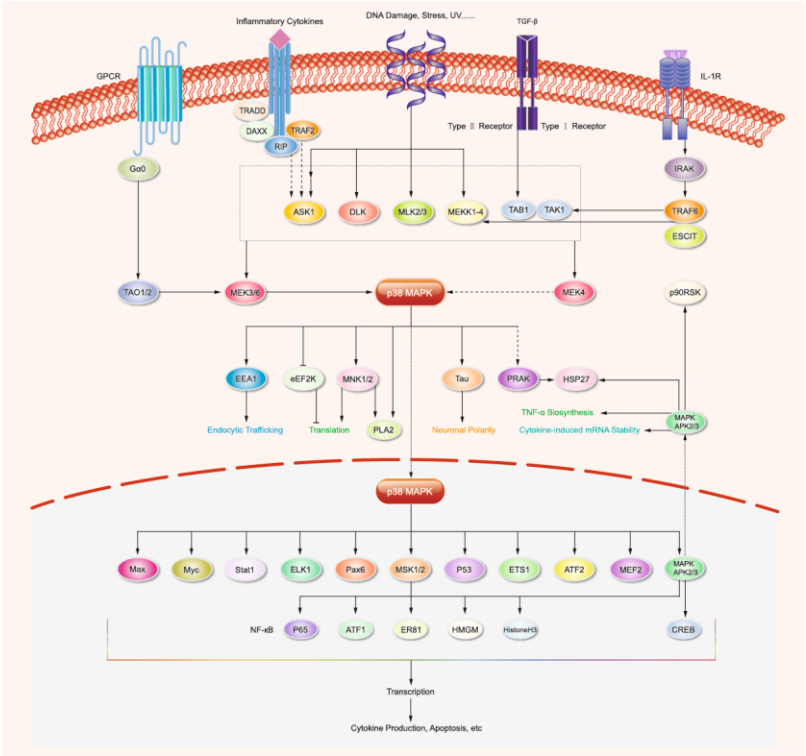

MAPK-p38 Signaling Pathway

Product name
IRAK1
IRAK4
TRAF6
DLK1
MAP3K5
TRAF2
MEK3

Product name
MAP2K4
MAP2K6
EEA1
eEF2K
ATP7A
KAT5
MAPT

Product name
HSPB2
RPS6KA1
STAT1
PAX6
ETS1
CREB1
MEF2C

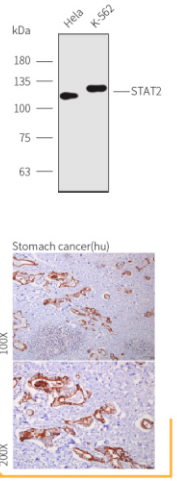

JAK-STAT Signaling Pathway

Product name
GRB2
SOCS2
SOCS3
STAT1
STAT2
STAT5A
MEK1

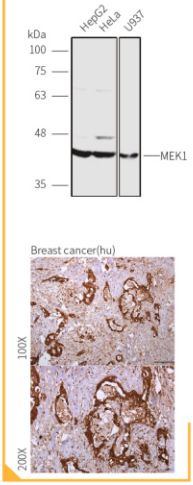

Product name
PIM1
CCND1
PIAS1
JAK3
RAF1
PIK3CA
PIK3CG

Product name
AKT1
mTOR
PTPN11

WB

Qualified products

The target band is specific in positive samples,such as different types and species samples(Fig 1)

K003449P

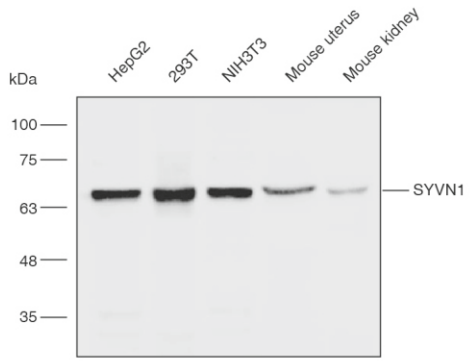

Fig 1

The non-specific bands is long distance from the target bands which does not affect the analysis of the results of the target bands(Fig 2).

K107072P

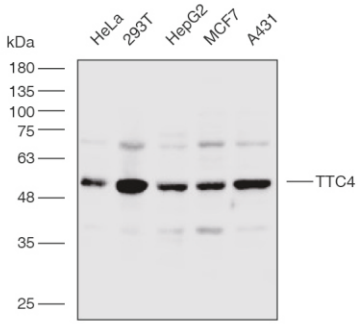

Fig 2

Unqualified products

No bands and the non-sepcific bands is shown in positive samples (Fig 3,4);

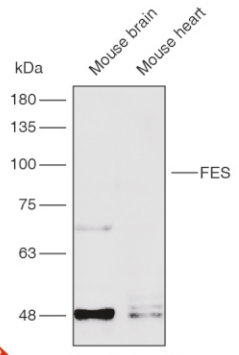

Fig 3(No bands)

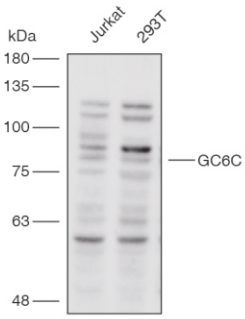

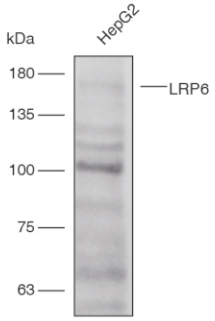

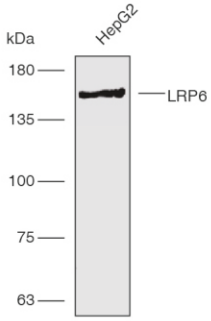

Fig 4(non-sepcific bands)

Sepcific bands is shown,but the primary antibody concentration below 1mg/ml,dilution>1:1000(Fig 5)

1:1000

1:200

Fig 5

IHC

Qualified products

The target protein are accurately located in positive samples,the results are divided into three levels(+/++/+++) according to the expression of target protein in positive samples(Fig 6)

K002167P

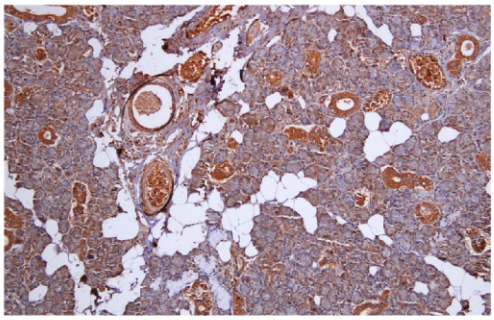

Fig 6

Unqualified products

The target protein have inaccurate location in samples(Fig 7).

The result shows in cytoplasm,should be nucleus
