Cell Separation Medium Kits

Beijing Solarbio Science & Technology Co.,Ltd.

Introduction

Solarbio cell separation medium kits are sterile, ready-to-use and low levels of endotoxin density gradient separation medium. It is designed for the isolation of viable cells such as lymphocytes, monocyte, mononuclear cell, leucocyte, polymorphonuclear granulocytes from peripheral blood, spleen, bone marrow, tumor infiltrating tissue and other viscera of human, mouse, rat, guinea pig, chicken, duck, goose, canine, swine, bovine, goat, equine, monkey, rabbit and fish.

Separation Principle

Solarbio cell separation medium kits are developed based on the methodology established by the studies of Bøyum and the investigations carried out in our laboratory. Techniques for separation of the major subgroups of different cells are mostly based on distinct density differences. Mononuclear cells (monocytes and lymphocytes) have a lower density than granulocytes and erythrocytes, different migration of cell types can be separated after density gradient centrifugation with our cell separation medium kits.

Specifications

- Density: 1.0770 + 0.001g/ml
- Osmolality: 290~350 mOsm/kg
- Sterile liquid: 0.1μm filtered

Product Features

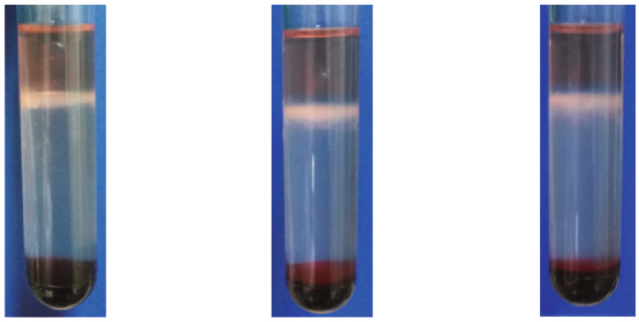

- Simple,convenient,rapid,complete the entire separation process within 20 mins;
- Solarbio cell separation medium kits contain the required reagents, including dilution buffer, washing buffer and erythrocytes lysis buffer(Leucocyte Separation Medium Kit&Polymorphonuclear Granulocyte Separation Medium Kit), which facilitate the separation procedure;
- High recovery, purity and viability of the separated target cells;
- Minimum contamination of erythrocytes.

Results

1、Well-defined target cells

As can be seen from the centrifugation results, the target cell of “white membrane” isolated by Solarbio cell separation medium kits are very clear and no diffusion. Under the same separation conditions, the obtained “white membrane” cells isolated by Brand A and B are partially dispersed to the separation medium, which indicate that Solarbio cell separation medium kits are better than the other two brand products.

2、Minimal erythrocyte contamination

Compared with the cell precipitation, the lymphocytes obtained with the separation medium kits of Solarbio are relatively pure and the erythrocytes pollution is minimal, while the lymphocytes obtained with the separation medium of Brand A , B have more erythrocytes pollution and visible erythrocyte precipitation at the bottom of the tube.

3、Rui's Giemsa composite staining solution (high-purity lymphocytes)

Solarbio cell separation medium kits have high recovery, purity and viability of the target cells. After centrifugation, well-defined target cells at the interface can be observed clearly and high purity of lymphocyte can also be observed after Wright Giemsa staining.
