Small Molecular Compounds

Beijing Solarbio Science & Technology Co.,Ltd.

Introduction

Solarbio small molecular compounds have two parts, the one includes dyes, fluorescent probes and reaction substrates which have no biological activity and can be directly used in cell experiment, the other has biological activity and function in regulation, signaling transduction, activation and inhibition, which includes organic small molecular compounds, natural compounds, active poly peptides and drugs, etc.

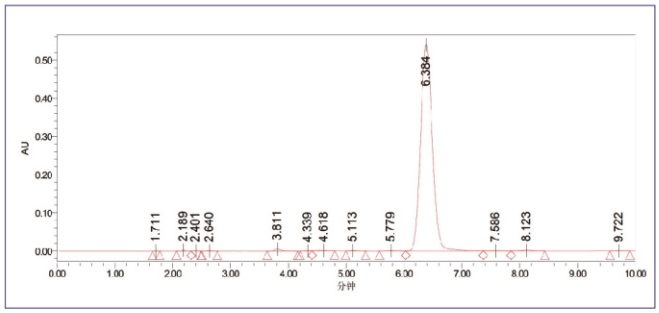

Solarbio has more than 30,000 products, focus on classic and popular targets and signaling pathways. Solarbio always follow up the latest scientific research, timely update and enrich product information, such as basic information, structure, target, pathway, solubility and customer feedback. We promise to provide the high quality products and rich data support. Most of the products have been validated by NMR and HPLC to ensure their performance.
